Brand New Book ***** Print on Demand *****.What Testing do I need to Complete on my Swimming Pool? If you have a swimming pool to maintain then you need to make sure you have a solid understanding of the different types of testing that need to be done. You have likely heard the terms tossed around but you need to be prepared to get in there and complete these tests. They need to be done routinely and they need to be done accurately so you get results you can rely upon. Perhaps the most important test to do on your swimming pool is the Ph levels. It is a weekly test that is very simple to perform. You just dip a strip that has chemicals on it into the pool. Then you compare the color you get to a chart that tells you the level that is currently present. From there you can add certain chemicals to balance it if the initial test wasnt within the right range. Chlorine is very common in most swimming pools. This is used to reduce the development of both bacteria and algae. They can spread rapidly if you dont keep them under control. As a result the water can turn cloudy and even green. The right amount of chlorine is important so that you kill what is a problem but you arent harming those that use the swimming pool. One test that many people overlook has to do with the level of calcium in the water. When you test this though you are actually testing a variety of other minerals as well. They include magnesium, iron, and manganese. The levels of them are going to significantly...
